The Human Machine... **How do we take care of it?**

General

Today we hear more about safety on the job and at home than ever before. With safety being preached so much that, we sometimes forget significance behind what the word safety really conveys. With all of the safety regulations, OSHA standards, work rules and other company minimum requirements, sometimes it becomes overwhelming, making us lose sight of what really is important.

Always remember that in safety, you protect:

NOT JUST A CAMERA – BUT A HUMAN EYE

NOT A PUMP – BUT A HUMAN HEART

NOT A COMPRESSOR – BUT A HUMAN LUNG

NOT JUST OIL AND GREASE – BUT HUMAN BLOOD

NOT JUST TIRES – BUT HUMAN FEET

NOT JUST A FORKLIFT – BUT A HUMAN BACK

Sometimes on jobsites workers get so involved with getting the job done that they forget sometimes that one of the hardest worked, and least cared for machines on the job is the human body. So look at the steps we take to care for equipment we operate on the job.

What steps do you take to make sure that the machine we call the human body is taken care of?

Safety and the rules we follow are there to stop the abuse that we have done in the past to the human machine.

Remember, all the actions you do have a consequence, try to make it be a positive one.

Basic Fire Safety
